

Heuristic evaluation

The website analysis was done to understand how the current portal works, what do people think about it. Website analysis is an important step in redesigning as we get to know the pain points and gain points of the current design. It helped us in understand which things are working and which are not and why somethings are not working. We tried to understand if all the brand guidelines were followed and what are the various ways to alter the brand guidelines. This website analysis was done on the basis of VIMM model, Heuristics and considering deloitte brand guidelines

Navigation

1. Labelling - 3
2. Ratio between page breadth and page length -
